

MOBILE FALL PROTECTION

Having an anchorage point on wheels has been a revolution in fall protection. We know that the industry has long sought a more compact fall protection solution, and thus we are extremely proud to introduce the Safety Bull. Smaller than the original TriRex™ and lighter than the Stinger™ the Safety Bull is our most versatile mobile fall protection unit.

When the Safety Bull is on the roof, two workers can attach to the anchorage point, put tools on the cart, and tie off for mobile fall protection. If a fall from the roof occurs, a powerful engagement arm will be mechanically propelled into the building's structure.

Proudly manufactured
in the USA.

LEADINGEDGESAFETY.NET/SAFETYBULL

KEY FEATURES

- 2 workers on fall arrest
- Designed for roofs <5°
- Made in America - manufactured to be the best quality in the industry
- 605 LBS.
